

## **infinite io Announces General Availability of Clustered NSC-110 Network-based Storage Controllers**

June 30, 2017 01:57 PM Central Daylight Time

AUSTIN, Texas – (BUSINESS WIRE) – infinite io, developer of the award-winning Network-based Storage Controllers, today announced the general availability of a new generation of controllers that support clustering for enhanced system scale and fault-tolerance. With the NSC-110, enterprises can transparently integrate private or public cloud storage into existing environments to dramatically reduce data storage costs.

“infinite io provides transparent data mobility between existing file-based workflows and cloud storage,” said Mark Cree, infinite io’s CEO. “We eliminate the need for complex overlay file systems, gateways, and messy stub files by installing in the network like a plug-and-play network switch. With infinite io, all data retains its local access profile regardless of where it has been migrated. Customers gain the cost savings associated with cloud storage while maximizing the investment made in existing systems.”

### **About infinite io, inc.**

Our mission at infinite io is to provide our customers with the best possible product experience. Our team has a track record of developing market-defining solutions in network routing and switching, security, high-speed packet inspection, and storage networking. Designed to be remotely managed and easily upgradeable, our products proactively self-monitor and make initial configuration and ongoing support a straight-forward and hassle-free experience. Please visit our website at [www.infinite.io](http://www.infinite.io) for more information.
