

infinite io announces general availability of the world's first network-based storage controller

The NSC-110 is available for immediate shipment

October 8, 2015 10:00 AM Central Daylight Time

AUSTIN, Texas – (BUSINESS WIRE) – [infinite io](http://infinite.io), developer of the world's only Network-based Storage Controller, announced today the general availability of the NSC-110. With the NSC-110, enterprises can transparently integrate private or public cloud storage into existing environments with no changes to applications, storage systems or the user experience.

"The unspoken truth in the storage industry is that over eighty percent of all data residing on storage systems is inactive," said Mark Cree, infinite io's CEO. "Between 2009 and 2015 over \$136 billion of file storage was deployed that is holding inactive data today. With the NSC-110, that data can be migrated to a private or public cloud where the storage cost is a fraction of traditional systems."

About infinite io, inc.

infinite io is headquartered in beautiful Austin, Texas, the world capital of live music, Formula 1 racing, awesome BBQ, Austin City Limits and SxSW. Our veteran team has a track record of introducing market-defining solutions in security, network routing/switching, and storage networking.
